

Engineered Wood Fiber for Playgrounds

Playground chips are made from 100% virgin Wood from the species of Pine, Douglas Fir or Cedar. Our playground chips are considered one of the safest wood products available for the playground environment because it contains no recycled content which may include metal or toxic residues. Meets ADA, ASTM, and CPSC playground surfacing standards and complies with all relevant ASTM standards: [F1292 for impact absorption, F2075 for material purity, and F1951 for wheelchair access.](#)

It is recommended that there is a containment border of at least twelve inches to allow for a safe depth of Engineered Wood Fiber. The subgrade should allow for adequate drainage from the playground box.
